

Description:

I love symbols

I love symbols can you find out what I want to say to you

%@\$%%#%\$\$#\$f\$e_&b_#(0%%f\$\$#!\$\$%f%\$\$*#!%#&d

Flag Format : RESTCON{<- FLaG ->}

Solution:

The description of the challenge tells us that we love symbols and we are provided with bunch of special characters along with some alphabets.

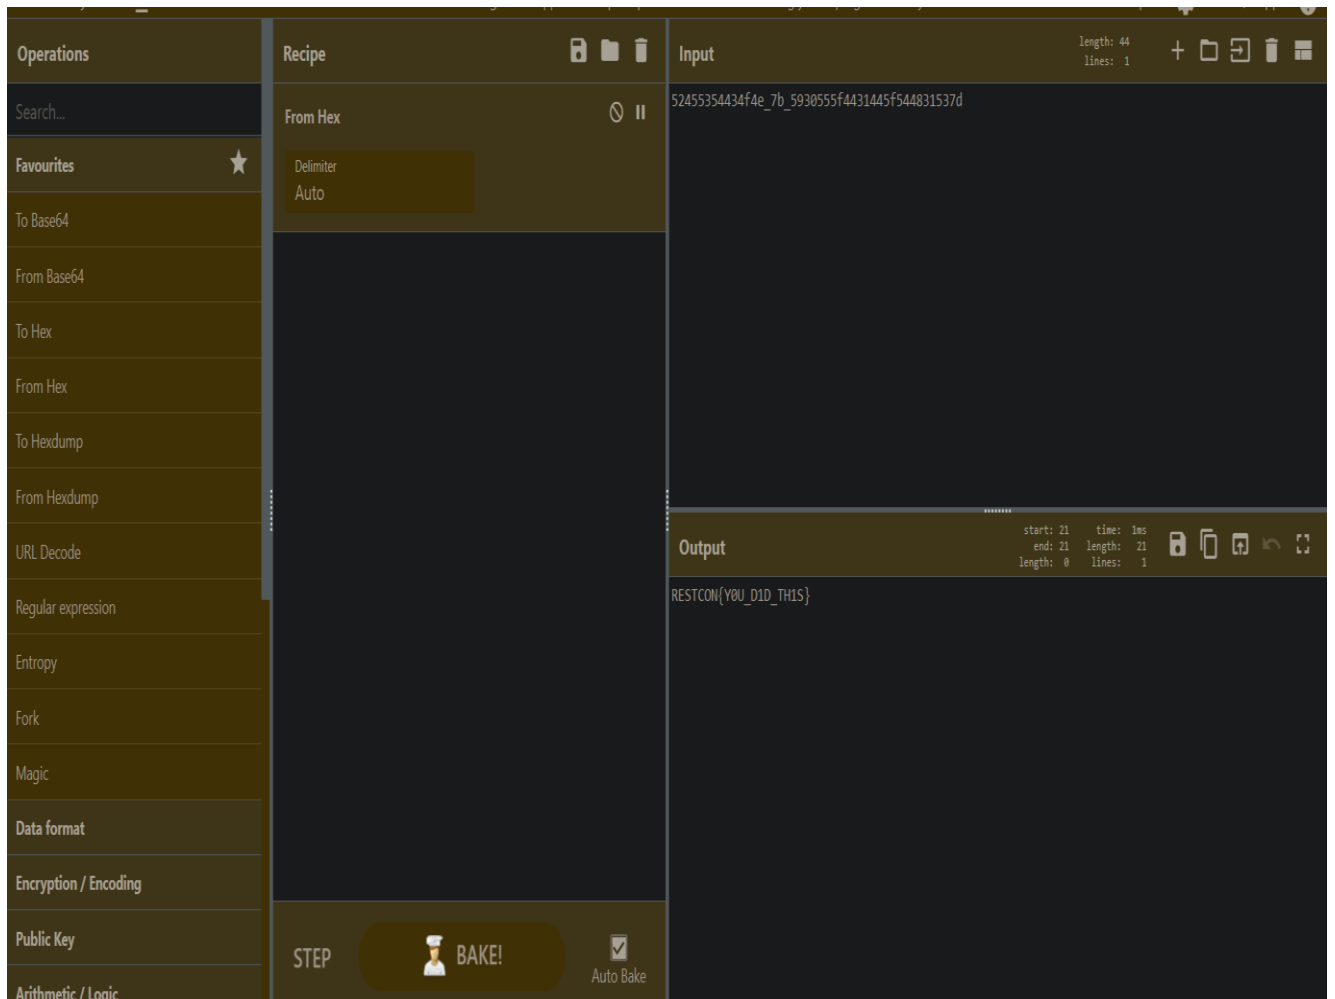

If you look these symbols/characters carefully you will find out that these special characters can be replaced by digits from numpad of keyboard.

After replacing we get,

52455354434f4e_7b_5930555f4431445f544831537d

This is hex, we have to convert it to ascii/text.

I use [CyberChef](#) to decode this hex.

We get the flag.

Flag is: RESTCON{YOU_D1D_TH1S}
